

## How People Learn

### Module 5: Domains and Their Interconnections

### **Changed Conceptualization**

Diagram of the Sun's Rays:

The sun is depicted almost off-screen as a yellow glow. The Earth is depicted with an even layer of atmosphere surrounding it. The sun's rays are depicted as horizontal arrows pointing to the Earth. Because of the curve of the earth's surface, the sun rays that reach the equator travel a relatively short distance and through relatively less atmosphere (shown as shorter lines), while those reaching areas farther from the equator travel a greater distance through more atmosphere (shown as longer lines).
