

## ***How People Learn***

### **Module 5: Domains and their Interconnections**

#### **Big Data**

A visualization of a network that symbolizes big data clusters: Many data points are illustrated as bubbles of all sizes and the relationships among those bubbles are interconnected through blue-colored lines. The visualization is highlighting its central portion where more explicit data points and connections are visible, which represents certain predictions made available through big data analysis. This portion is presented in bigger-sized bubbles and thicker lines in concentrated shades of blue where blue lines turned into blurred blue shades due to the repeated patterns observed.
