

## ***How People Learn***

### **Module 5: Domains and their Interconnections**

### **Climate Change**

Climate change map: Two side by side global map-views of the Earth comparing the visual data of Temperature Anomaly over a period of time. The temperature anomaly is indicated by the color red. The map on the left represents past data and is mostly blue, with only a few areas of red indicating the temperature anomalies of the above zero Fahrenheit. The map on the right represents more recent data and is mostly in red, indicating temperature anomalies that are far more prevalent around the globe.
